Uva's Rigging Guide for Studio and Location Aug 25 2022 Readers of Mike Uva's GRIP BOOK who are interested in more detailed information on the work of the grip department will welcome his new rigging manual, clearly detailing all the ways to mount cameras and lights both on a set as well as on location. The book covers the latest truss systems, rigging equipment and portable stages, as

well as lifts, boom arms and camera mounts for every type of moving vehicle. The book is not limited to equipment specifications, however; Uva offers tips and tricks throughout in order to make the process of setting up and shooting safer and more efficient. Grips often need to invent makeshift solutions in a short time, and Uva shares many such devices developed over his years in the film and TV industry. This book will help grips and key grips move on to the bigger feature projects and commercials that require this equipment. It will also be useful for directors of photography and producers in pre-planning the required equipment for specific shots.

VLSI Specification, Verification and Synthesis Apr 09 2021 VLSI Specification, Verification and Synthesis Proceedings of a workshop held in Calgary from 12-16 January 1987. The collection of papers in this book represents some of the discussions and presentations at a workshop on hardware verification held in Calgary, January 12-16 1987. The thrust of the workshop was to give the floor to a few leading researchers involved in the use of formal approaches to VLSI design, and provide them ample time to develop not only their latest ideas but also the evolution of these ideas. In contrast to simulation, where the objective is to assist in detecting errors in system behavior in the case of some selected inputs, the intent of hardware verification is to formally prove that a chip design meets a specification of its intended behavior (for all acceptable inputs). There are several important applications where formal verification of designs may be argued to be cost-effective. Examples include hardware components used in "safety critical" applications such as flight control, industrial plants, and medical life-support systems (such as pacemakers). The problems are of such magnitude in certain defense applications that the UK Ministry of Defense feels it cannot rely on commercial chips and has embarked on a program of producing formally verified chips to its own specification. Hospital, civil aviation, and transport boards in the UK will also use these chips. A second application domain for verification is afforded by industry where specific chips may be used in high volume or be remotely placed.

Sun Solaris to IBM AIX 5L Migration: A Guide for System Administrators May 10 2021 The aim of this IBM Redbooks publication is to provide a technical reference for IT system administrators in organizations that are considering a migration from Sun Solaris to IBM AIX 5L-based systems. This book presents a system administrator view of the technical differences that exist and the methods that are necessary to complete a successful migration to AIX 5L-based systems. This book is designed primarily as a reference for experienced Sun Solaris 8 or 9 system administrators who will be working with AIX 5L. This book is not an AIX 5L administration how-to book for system administrators who are beginners, but rather a guide for experienced administrators who have to translate a given Solaris system administration task to AIX 5L.
