Building Services Handbook May 17 2021 The ninth edition of Hall and Greeno's leading textbook has been reviewed and updated in relation to the latest building and water regulations, new technology, and new legislation. For this edition, new updates includes: the reappraisal of CO2 emissions targets, updates to sections on ventilation, fuel, A/C, refrigeration, water supply, electricity and power supply, sprinkler systems, and much more. Building Services Handbook summarises the application of all common elements of building services practice, technique and procedure, to provide an essential information resource for students as well as practitioners working in building services, building management and the facilities administration and maintenance sectors of the construction industry. Information is presented in the highly illustrated and accessible style of the best-selling companion title Building Construction Handbook. THE comprehensive reference for all construction and building services students, Building Services Handbook is ideal for a wide range of courses including NVQ and BTEC National through Higher National Certificate and Diploma to Foundation and three-year Degree level. The clear illustrations and complementary references to industry Standards combine essential guidance with a resource base for further reading and development of specific topics.

Tolley's Industrial and Commercial Gas Installation Practice Nov 03 2022 This is the third of three volumes of essential reference for those concerned with the installation and servicing of domestic and industrial gas equipment. This volume deals with the various aspects of installing and servicing industrial and commercial appliances and associated equipment. The revised fourth edition is brought fully up to date with current Standards, in line with requirements of the ACS Certificates of Competence and NVQs, and addresses the radical changes seen in the practice of soundness testing and purging of industrial and commercial gas installations in excess of, and below, 1m³, as well as strength and tightness testing and direct purging of small low pressure industrial and commercial natural gas installations. Also addressed in the new edition are important changes to standards for gas installation pipework, boosters and compressors on industrial and commercial premises; gas installation in educational establishments; LPG cylinders in mobile catering vehicles, service vehicles and similar commercial units; as well as flues and ventilation for larger gas appliances. Incorporating many illustrations and worked examples throughout the text, Volume 3 combines a concise reference with practical application in real-world engineering contexts to create an essential handbook for all aspects of the installation and servicing of domestic gas appliances, ideal for both students new to the field as well as professionals and none-operational professionals (e.g. Specifiers, Managers, Supervisors) as an ongoing source of reference. * Comprehensive reference combined with practical application - an essential handbook for gas service technology * Fully updated in line with the latest changes to Standards, NVQs and ACS Certificates of Competence * Hundreds of line drawings and photographs maximise accessibility of the text, enabling readers to easily recognise the appliances under discussion

Metal Sustainability Oct 10 2020 The sustainable use of natural resources is an important global challenge, and improved metal sustainability is a crucial goal for the 21st century in order to conserve the supply of critical metals and mitigate the environmental and health issues resulting from unrecovered metals. Metal Sustainability: Global Challenges, Consequences and Prospects discusses important topics and challenges associated with sustainability in metal life cycles, from mining ore to beneficiation processes, to product manufacture, to recovery from end-of-life materials, to environmental and health concerns resulting from generated waste. The broad perspective presented highlights the global interdependence of the many stages of metal life cycles. Economic issues are emphasized and relevant environmental, health, political, industrial and societal issues are discussed. The importance of applying green chemistry principles to metal sustainability is emphasized.

Topics covered include: • Recycling and sustainable utilization of precious and specialty metals • Formal and informal recycling from electronic and other high-tech wastes • Global management of electronic wastes • Metal reuse and recycling in developing countries • Effects of toxic and other metal releases on the environment and human health • Effect on bacteria of toxic metal release • Selective recovery of platinum group metals and rare earth metals • Metal sustainability from a manufacturing perspective • Economic perspectives on sustainability, mineral development, and metal life cycles • Closing the Loop – Minerals Industry Issues The aim of this book is to improve awareness of the increasingly important role metals play in our high-tech society, the need to conserve our metal supply throughout the metal life cycle, the importance of improved metal recycling, and the effects that unhindered metal loss can have on the environment and on human health.
