[An Evaluation of California's Permanent Disability Rating System](#) Sep 14 2021 California's disability rating system has been criticized as being inconsistent and prone to promote disputes over the appropriate level of permanent disability benefits. This monograph follows an earlier interim briefing on California's permanent disability rating schedule. The authors provide a systematic evaluation of the ratings system that was used prior to the state's 2004 workers' compensation reform efforts. Among other analyses, they examine the extent to which workers with higher disability ratings experience higher earnings losses.

[Hearing Loss](#) Sep 02 2020 Millions of Americans experience some degree of hearing loss. The Social Security Administration (SSA) operates programs that provide cash disability benefits to people with permanent impairments like hearing loss, if they can show that their impairments meet stringent SSA criteria and their earnings are below an SSA threshold. The National Research Council convened an expert committee at the request of the SSA to study the issues related to disability determination for people with hearing loss. This volume is the product of that study. [Hearing Loss: Determining Eligibility for Social Security Benefits](#) reviews current knowledge about hearing loss and its measurement and treatment, and provides an evaluation of the strengths and weaknesses of the current processes and criteria. It recommends changes to strengthen the disability determination process and ensure its reliability and fairness. The book addresses criteria for selection of pure tone and speech tests, guidelines for test administration, testing of hearing in noise, special issues related to testing children, and the difficulty of predicting work capacity from clinical hearing test results. It should be useful to audiologists, otolaryngologists, disability advocates, and others who are concerned with people who have hearing loss.

The Federal Employees' Compensation Act (FECA) Jun 18 2019 The Federal Employees' Compensation Act (FECA) is the workers' compensation program for federal employees. Like all workers' compensation programs, FECA pays disability, survivors, and medical benefits, without fault, to employees who are injured or become ill in the course of their federal employment and the survivors of employees killed on the job. The FECA program is administered by the Department of Labor (DOL) and the costs of benefits are paid by each employees' host agency. Employees of the U.S. Postal Service (USPS) currently comprise the largest group of FECA beneficiaries and are responsible for the largest share of FECA benefits. This book examines the key policy issues facing the FECA today, including the disproportionate share of claims and program costs attributed to postal workers, the payment of FECA benefits after retirement age, the overall generosity of FECA disability benefits as compared with those offered by the states, and the overall administration of the FECA program.

An International Comparison of Workers' Compensation Jan 26 2020 Until a few years ago I concentrated my attention on workers' compensation programs in the United States and Canada. Because the United States has 52 programs and Canada has eight, I was exposed to a diversity of approaches that caused me to believe that few other approaches existed. Since 1984 I have become more aware of what the rest of the world has been doing and discovered that my knowledge needed to be broadened significantly. The trigger action was a 1984 faculty research exchange agreement between Keio University in Tokyo and the University of Minnesota that made it possible for me to spend much of my time studying Japan's workers' compensation program and comparing it with the United States approaches. Japan's program had several features that I had not encountered in the United States or Canada. After this experience I attached considerably more value to and spent more time studying the Social Security Administration's biennial reports on Social Security Programs Throughout The World, which include workers' compensation programs. I also presented papers at two meetings of the International Insurance Society based on my Japanese and Social Security Administration report research. Many participants urged further study in this area and offered to send me materials describing their nations' programs. The result is this study which I hope that readers will find interesting and worthwhile.

Making Eye Health a Population Health Imperative Aug 21 2019 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.
