**Motivation, Language Attitudes and Globalisation** Aug 06 2020 This volume presents the results of the largest ever language attitude/motivation survey in second language studies. The research team gathered data from over 13,000 Hungarian language learners on three successive occasions: in 1993, 1999 and 2004. The examined period covers a particularly prominent time in Hungary's history, the transition from a closed, Communist society to a western-style democracy that became a member of the European Union in 2004. Thus, the book provides an 'attitudinal/motivational flow-chart' describing how significant sociopolitical changes affect the language disposition of a nation. The investigation focused on the appraisal of five target languages - English, German, French, Italian and Russian - and this multi-language design made it also possible to observe the changing status of the different languages in relation to each other over the examined 12-year period. Thus, the authors were in an ideal position to investigate the ongoing impact of language globalisation in a context where for various political/historical reasons certain transformation processes took place with unusual intensity and speed. The result is a unique blueprint of how and why language globalisation takes place in an actual language learning environment.

Recent UK research indicates that 1 in 4 primary school children and 1 in 10 secondary school children are bullied at least once a term. Bullying makes children lonely, unhappy and frightened. Tackling bullying and its side-effects can be a very delicate business, and each case is unique. Often parents don't know anything is wrong until events overtake them, or they can't think of the best way to help their child survive the experience. Being armed with the right information about bullying, recognising the symptoms to look out for, and knowing effective ways of breaking the cycle of abuse can be crucial factors in ensuring your child deals with their tormentors in a calm, positive and proactive way. *School Bullying in Different Cultures* Nov 01 2022 School bullying is widely recognized as an international problem, but publications have focussed on the Western tradition of research. A long tradition of research in Japan and South Korea, and more recently in mainland China and Hong Kong, has had much less exposure. There are important and interesting differences in the nature of school bullying in Eastern and

Western countries, as the first two parts of this book demonstrate. The third part examines possible reasons for these differences - methodological issues, school systems, societal values and linguistic issues. The final part looks at the implications for interventions to reduce school bullying and what we can learn from experiences in other countries. This is the first volume to bring together these perspectives on school bullying from a range of Eastern as well as Western countries.

**Free Us from Bullying** Oct 27 2019 Much of what we believe about bullying isn't true. An estimated twenty million oppressed children need our help today. A critical mission field awaiting Christians is to combat bullying and proclaim liberty to wounded children. To counter bullying, we must first understand some common misconceptions. •It is not necessarily true that bullies have low self-esteem and come from abusive homes. •It is not true that kids who aren't bullied are indifferent to those who are. •Bullying is not a "school problem," and teachers are not the frontline defense. •Children who are bullied do not become stronger adults. Bullies cannot be stopped merely with more compassion and understanding. In fact, bullying stems from the same roots as racism, sexual harassment, and even genocide, and it requires people to combat it in similar ways that they combat other forms of oppression and injustice. We often think of combating injustice overseas, but we can combat a very real and dangerous injustice in our own neighborhoods. After more than a decade of working with tens of thousands of students,

teachers, parents, and pastors, Coughlin knows that bullying represents the worst in human nature, but combating it promotes the best. Kindness and awareness—two buzzwords in today's anti-bullying movement—will not end bullying on their own. They must be activated by courage, transforming bystanders into righteous, loving protectors of targets. When we join this mission of love and justice, we will become peacemakers who are blessed and called children of God (Matt. 5:9).

**Changes in the portrayal of bullying language. A discourse analysis of two young adult novels** Sep 30 2022 Seminar paper from the year 2021 in the subject English Language and Literature Studies - Linguistics, grade: 2,0, , language: English, abstract: This seminar paper wants to investigate how the portrayal of bullying language and methods has changed over the last 46 years, because it is a fact that words have the power to hurt somebody deeply. For this purpose, two fictional young adult novels, "Blubber" by Judy Blume (1974), and "Friend me" by Sheila M. Averbuch (2020), were chosen. The paper starts with an investigation into the language of bullying, taking into account a definition, different forms, and characteristics of bullying, the roles of the participants, and typical linguistic use of words and phrases. Afterwards, the methodology will be explained, accompanied by the data collection procedure and the data analysis, before the research findings will be explained. *Preventing Bullying Through Science, Policy, and Practice* Nov 20 2021 Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

This book offers a new approach to the problem of school bullying. The question of what constitutes a useful theory of bullying is considered and suggestions are made as to how priorities for future research might be identified. The integrated, systemic model of school bullying introduced in this book is based on four qualitative studies and incorporates theory from systemic thinking;

cognitive, social, developmental and psychoanalytic psychology; sociology, socio-biology and ethology. The possible functions served by bullying behaviour are explored. Consideration is also given to the potential role of unconscious as well as conscious processes in bullying. The model suggests a number of causal processes within one-to-one relationships and peer groups, and highlights factors within individuals and schools that shape the form, intensity and duration of bullying behaviour in practice. The issue of 'difference' is also addressed, focusing on childhood deafness.

**Bullying** Feb 09 2021 With the increased recognition of the devastating effects of bullying, there is now a tremendous amount of information available on its prevalence, associated factors, and the evaluation data on well known school-wide anti-bullying education, prevention, and intervention programs. Yet numerous complex issues span individual and societal variables---including individual characteristics and vulnerability, peer and family relationships and dynamics, classroom and school milieus, and stigma and discrimination---making the task of understanding, assessing, and responding to bullying on the ground complicated for researchers and nearly impossible for school-based practitioners. Untangling some of the thorny issues around what causes and constitutes bullying, including how to think differently about overlapping phenomena such as racism, sexism, homophobia, or sexual harassment, Faye Mishna presents an exhaustive body of empirical and theoretical literature in such a way as to be accessible to both students and practitioners. Chapters will equip readers to think critically about contexts, relationships, and risk and protective factors that are unique to individual students and schools, and to effectively assess and design multi-level interventions for a variety of aggressive behaviors. Paying particular attention to emerging types of victimization, such as cyber bullying, and to vulnerable groups, such as LGBTQ youth and students with disabilities, Mishna distills the key elements of successful interventions with both victims and aggressors and includes case examples and practice principles throughout. The result is an integrated, nuanced synthesis of current and cutting-edge scholarship that will

appeal to students, practitioners, and researchers in social work, education, and psychology.
